

About EEG

EEG's 3 key differences for your energy efficiency advantage

CB Richard Ellis

"Your program not only produced rebates, but it led to many projects that otherwise wouldn't have happened. You helped us quantify the opportunities, then guided us through to their completion."

Cushman & Wakefield

"We found the incentive program operated by Energy Innovation Group a valuable combination of rebate, access to emerging technologies, and having a single source to manage all aspects of developing and implementing energy strategy."

California Energy Commission

"EIG's guidance led to participants taking a more comprehensive approach to energy efficiency."

BOMA – Greater LA

"We are securing opportunities for our membership that individual companies might not be able to find on their own."

EEG is the nation's only integrator of technologies, special incentives and facility-wide, concept-through-completion project strategies and implementation.

EEG's 3 Key Differences

Technology... The latest technology advances spearhead a comprehensive approach to produce major added savings opportunities.

Incentives ... Special utility programs, available exclusively through EEG provide greater benefits for compelling economics.

Management ... One-stop system and capability provides exceptional effectiveness, from strategies through implementation.

The Extraordinary Results

The most energy-efficient facilities can use the EEG advantage to *further* reduce energy costs beyond conventional approaches, typically 8% to 12%, generally with 18- to 36-month paybacks.

For energy users with less advanced conservation efforts, EEG is often able to deliver total energy cost savings of 30% to 50%, typically with 12- to 30-month paybacks.
