

Technology Opportunities

Daylight Harvesting

Cuts lighting cost 40%-50% in areas with natural daylight.

HVAC Ultraviolet (UVC)

Emitters clean coils, saving energy and improving indoor air quality.

Turbocor Compressors

Oil-free, with one moving part, saves up to 70% of HVAC cost.

Hotel Keycard System

Stops energy waste when rooms are empty, for 20%-45% savings.

... Solar, LED and induction light, FANWALL systems, controllable HID lighting, HVAC compressor cycle control, EMS, demand response, thermal storage, window film, high-efficiency HVAC, VFDs and more ...

The Technology Difference

EIG specializes in identifying and bringing the latest advances in traditional and emerging technologies to the mainstream marketplace, integrating them as part of comprehensive strategies for energy users to cut costs far beyond standard energy management approaches.

The Incentive Difference

EEG develops EEG-exclusive special incentive programs with utilities to provide energy users with heavily subsidized opportunities to often cover 50% and up to 100% of the cost for comprehensive energy projects.

The Management Difference

Comprehensive approach ... Rather than limiting savings to an individual project, we guide energy users with the EEG comprehensive 'big picture' approach, led by the latest technology advances to typically reduce *total* energy cost 15-25% and often to 50%.

Concept through completion capability ... EEG manages every step of a project, from strategy development, facility audits, option evaluation, specification development, recommendations report, completion of installation, construction management, rebates and project financing.

No-capital-outlay option ... EEG's finance sources provide you with options to complete projects without capital outlay, enabling you to take advantage of all worthwhile possibilities to cut energy cost. Average annual savings are \$5 to \$7 per each \$1 of annual financing cost.

Contact EEG for a no-cost facility review and report of savings and incentive opportunities:
